

Southern New Jersey County Health Data and Rankings

Data is from the Robert Wood Johnson Foundation's County Health Rankings¹

The Approach

The *University of Wisconsin Population Health Institute* and the *Robert Wood Johnson Foundation* utilize a comprehensive model to calculate their annual county health rankings. The purpose of the model is to provide a holistic tool for understanding the wide range of health determinants.

The rankings are based on two categories, *Health Outcomes* and *Health Factors*. Health Outcomes are determined by variables related to Length of Life and Quality of Life while Health Factors rankings are based on Health Behaviors, Clinical Care, Social and Economic Factors and the Physical Environment. Based on the Robert Wood Johnson's County Health Rankings, the South Jersey Region is the unhealthiest region in the state.
